React Js, Redux

Perfusion

(September 01, 2021 - Present)

Online Medical Software Application for Patients

It is a health care equipment and service provider that strives to provide the highest quality services to hospitals, manufacturers, and other medical professionals. As an established health care company, they recognize the challenges health care professionals face when several patients are sitting at the desk, each with individualized health care information. Therefore, they decided to develop an application for easy data access, real time data availability, patient records, and other critical metrics at their fingertips to simplify this complex process. This system would enable medical professionals to efficiently manage all of the common procedures including Cardiopulmonary Bypass, Standby, Auto-transfusion, Platelet Therapy, and ECMO, among others

C#, ASP.NET 4.0, Azure , SQL Server, SignalR, Entity Framework

eAuction

(January 01, 2019 - July 31, 2020)

eAuction Portal

An auction is a process of buying and selling goods or services by offering them up for bid, taking bids, and then selling the item to the highest bidder. The open ascending price auction is arguably the most common form of auction in use today. Participants bid openly against one another, with each subsequent bid required to be higher than the previous bid. An auctioneer may announce prices, bidders may call out their bids themselves (or have a proxy call out a bid on their behalf), or bids may be submitted electronically with the highest current bid publicly displayed. The auctioneer begins with a high asking price for some quantity of like items; the price is lowered until a participant is willing to accept the auctioneer's price for some quantity of the goods in the lot or until the seller's reserve price is met. While auctions are most associated in the public imagination with the sale of antiques, paintings, rare collectibles and expensive wines, auctions are also used for commodities, livestock, radio spectrum and used cars. In economic theory, an auction may refer to any mechanism or set of trading rules for exchange.
